

P2-G + CpGPT - locked cascade topology

CascadeDeepSet | scalar_rbs | max/max | explicit_only | CpGPT static 128-d | native joint train

Product features (ADR 0009 - no TBS) | CpGPT = DNA-sequence embedding, not classical PE

Gene MBS | orphan RBS | direct CpGs | static 128-d looked up by coordinate, identical across samples

Readout: freeze encoder -> nested elastic-net. Staged S1-S4 FAIL vs native P2-G. Cascade+CpGPT smoke in GPU queue.

Locked metrics so far (topology without CpGPT on cascade OOF)

P2-G topology screen (mbs_e2e): tissue F1 0.355 | age MAE 13.43 | sex AUROC 0.853

Nested 3-fold: 0.335 / 9.81 / 0.759 | CpGPT effect on cascade: smoke queued (N-light YES)
